DEVOPS ENGINEER

CORE COMPETENCIES

- CI/CD Pipeline Development
- Infrastructure as Code (IaC)
- Cloud Infrastructure Design
- Deployment Automation
- Application Modernization
- Cloud Security and Compliance
- Cloud Cost Optimization
- High Availability Architecture
- Containerization & Orchestration
- Scalable Infrastructure Solutions
- Disaster Recovery Planning
- Infrastructure Monitoring
- Process Improvement
- Performance Optimization
- Version Control & Code Management

TECHNICAL SKILLS

- Cloud Platforms:** AWS (EC2, S3, VPC, IAM), Azure (Azure Container App, Azure Static Web Apps, Microsoft Entra ID)
- Infrastructure as Code (IaC):** Terraform
- Containerization & Orchestration:** Docker
- CI/CD Tools:** Jenkins, GitHub Actions
- Artifact and Code Quality:** Jfrog Artifactory, SonarQube
- Version Control & Collaboration:** Git, GitHub, GitLab
- Monitoring & Logging:** AWS CloudWatch
- Scripting & Automation:** Bash, Python
- Operating Systems:** Linux, Windows
- Networking & Security:** VPC, Route Tables, NAT Gateways, Load Balancers, Security Groups, NACLs
- Incident/Ticket Management:** Pagerduty, OpsGeine, Jira
- Database:** PostgreSQL

EDUCATION

- Bachelor of Engineering in Information Technology** | Nagpur University | 2020

PROFILE SUMMARY

- Proactive and solutions-focused DevOps & Cloud Engineer with 3+ years of experience in designing, automating, and optimizing cloud and DevOps solutions to support high-performance and scalable systems.
- Proven success in enhancing deployment efficiency and reducing infrastructure provisioning time through advanced automation and Infrastructure as Code (IaC) practices.
- Strong expertise in CI/CD pipeline development, cloud infrastructure management, containerization, and driving seamless delivery processes.
- Focused on collaborative problem-solving, continuous improvement, and driving innovation to meet evolving business and technical needs.

KEY CONTRIBUTIONS

- Infrastructure Automation & Efficiency:** Achieved 60% reduction in cloud infrastructure provisioning time by implementing automated deployment workflows using Terraform, significantly minimizing manual efforts.
- Deployment Acceleration & Stability:** Improved overall deployment speed and operational efficiency by 40%, contributing to reduced outages, seamless releases, and faster time-to-market for critical business applications.
- Application Modernization & Scalability:** Led the successful migration of monolithic applications to a containerized microservices architecture, enhancing system scalability, flexibility, and easier manageability.
- Operational Excellence & Reliability:** Received recognition for delivering effective DevOps support through strong troubleshooting and CI/CD pipeline optimization, improving system reliability, availability, and operational resilience.

WORK EXPERIENCE

Feb 2026 – Present: Kratin/TruliaCare India — DevOps Engineer

- Assisted in designing and implementing CI/CD pipelines using Jenkins to automate build, test, and deployment processes.
- Containerized applications using Docker, integrated Azure Container Registry (ACR) for image management, and deployed applications on Azure Container Apps and Azure Static Web Apps to enable scalable backend and frontend delivery.
- Automated deployment processes, reducing manual effort and improving release efficiency.
- Collaborated with development teams to troubleshoot deployment issues and optimize CI/CD pipelines.
- Deployed containerized applications on on-premises servers, ensuring reliable application delivery and environment consistency.
- Implemented secure remote access and credential management using Apache Guacamole and Passbolt, enhancing access control and system security.

May 2025 – Dec 2025: Freelance DevOps Engineer

- Enhanced existing CI/CD pipelines built on GitHub Actions and later migrated them to Jenkins to improve flexibility, control, and customization of build and deployment workflows.
- Deployed and managed containerized applications on AWS (EC2, S3, IAM), ensuring secure, scalable, and reliable application hosting.
- Implemented monitoring and alerting using AWS CloudWatch to track application performance and maintain system stability across deployments.
- Created and maintained technical documentation for CI/CD pipelines, deployment processes, and infrastructure setup to support team reference and knowledge sharing.

CERTIFICATION

- Microsoft Azure Fundamentals (AZ-900)

Aug 2022 – Aug 2024: cloudEQ – DevOps / SysOps Administrator

DevOps Engineer

Project: McDonald’s – Enterprise DevOps

- Developed and maintained **CI/CD automation pipelines** supporting seamless build, test, and deployment workflows.
- Integrated **code quality, security scanning, and artifact management tools** into pipeline ecosystems to ensure end-to-end software delivery automation.
- Managed **containerization** using Docker, improving application scalability and deployment consistency.
- Built and managed **infrastructure automation using Terraform**, promoting Infrastructure as Code (IaC) best practices.
- Collaborated with cross-functional teams to **troubleshoot deployment and pipeline issues**, ensuring continuous delivery and system reliability.
- Participated in incident response and on-call operations using **PagerDuty** and **OpsGenie**, contributing to root cause analysis and resolution of production issues.

SysOps Administrator

Project: McDonald’s – MCD Support

- Designed, configured, and optimized **cloud infrastructure** including **VPC, IAM, Load Balancers, and Networking components** in AWS for secure and scalable environments.
- Provisioned and managed **cloud resources** (EC2, S3), focusing on high availability, disaster recovery, and cost optimization.
- Implemented **monitoring and alerting solutions** using AWS CloudWatch for proactive system health management.
- Automated infrastructure provisioning and configuration management using **Terraform**, reducing manual interventions and ensuring consistency.
- Facilitated **version control and collaboration** through Git repository management, enabling effective branching strategies and code lifecycle management.
- Ensured **comprehensive technical documentation and operational guidelines** for infrastructure, deployments, and configurations.

KEY PROJECTS & CONTRIBUTIONS

DevOps Pipeline Implementation

Role: DevOps Engineer

Designed and implemented robust CI/CD pipelines using Jenkins and GitHub Actions, integrated with SonarQube to automate application build, testing, and deployment while managing Docker-based containerized deployments.

Cloud Infrastructure & Automation

Role: SysOps Administrator

Provisioned, configured, and managed AWS cloud infrastructure using Terraform, ensuring secure and scalable environments. Administered EC2 instances, networking (VPC, subnets, security groups), and system configurations while maintaining high availability. Implemented monitoring and alerting using CloudWatch, and handled incident response, troubleshooting, and system performance optimization in a production environment.
